

Conditional Statements

If Statement: A conditional statement that executes q if p is true

```
let age = 13;
let value= false;

if(age >=18){
  console.log(`Text Output Here`);
}

if(value){

}
```

Else Clause: What happens if p is not true

```
let age = 13;

if(age >=18){
  console.log(`Text Output Here`);
}
else{
  console.log(`Text Output Here`);
}
```

Else If: Another conditional if p isn't true

```
let age = 13;
```

```
if(age >=18){  
    console.log(`Text Output Here`);  
}  
else if(age < 0){  
    console.log(`Text Output Here`);  
}  
else {  
    console.log(`Text Output Here`);  
}
```

Comparison Operations: Using operations in a conditional statement

```
let variable = 0;
```

```
if(variable >=18){  
    console.log(`Text Output Here`);  
}  
else if(variable <=18){  
    console.log(`Text Output Here`);  
}  
else if(variable ==18){  
    console.log(`Text Output Here`);  
}
```
